**with Integrity**

## CLIANTHA'S ACCELERATED APPROACH TO FIRST IN HUMAN TRIALS....

First-In-Human (FIH) trials are an important first step in which safety of participants is paramount to determine dose safety, tolerability and pharmacokinetic profiles. **At Cliantha, we incorporate mechanism of action and efficacy into FIH trials to fast-track drug development.**

## ABOUT CLIANTHA

Cliantha Research, a global clinical research organization (CRO), provides comprehensive services including Study/Program Consultation, Early/Late Phase, Bioanalytical, Biometrics and Medical Writing. Cliantha's high throughput Phase I and outpatient clinics have expertise and experience in a variety of areas including Allergy, Consumer, Dermatology, Environmental, Ocular, and Respiratory research.

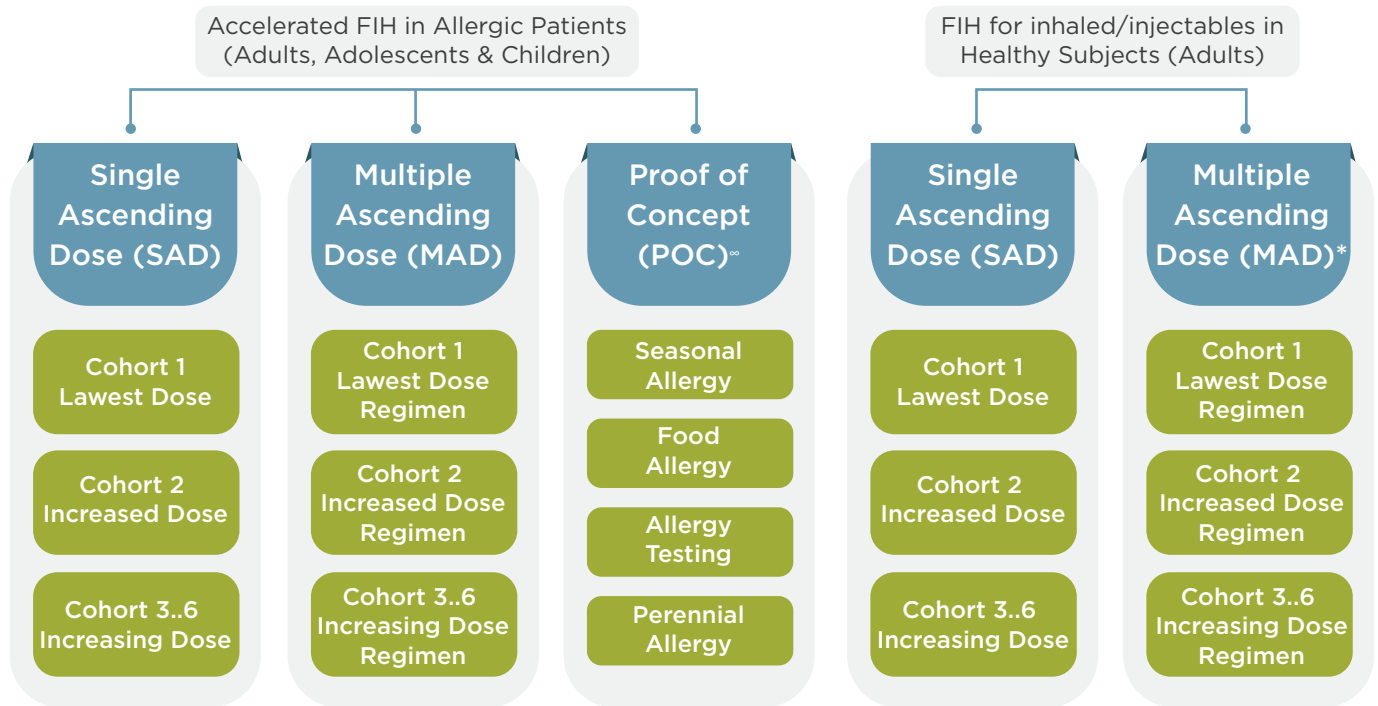

# Two decades, thousands of participants @ Cliantha

With 17 years of excellence in research, Cliantha offers wide array of early phase services accomplished by our trained professionals. These services can be accessed as part of an integrated program or as a stand-alone service at our clinical or multicentric sites.

Cliantha clinics have a strong track-record of successful early phase research. We can customize our design to provide cost and time efficiencies while still maximizing the outputs from one study.

We specialize in:

## Inhaled and Injectable Products & Accelerated FIH Proof-of-Concept (POC)

<sup>∞</sup> POC methods such as controlled allergen exposure in an allergen chamber, titrated skin prick testing, nasal allergen and oral food challenge were utilized.

Ask about how your drug development may be accelerated in Phase 1.

\*Biomarkers for mechanism of action and to support indication target. Examples include Multiple Sclerosis, Pulmonary Fungal Infection, and Primary Membranous Nephropathy studied through Cliantha's CRO Services and Site Networks.

Ask about Cliantha's programmatic approach to drug development.

All achieved under one well-designed study
